Windular Research and Technologies Inc., attends CommunicAsia in Singapore for a second straight year.

Windular Research and Technologies Inc. Attends CommunicAsia in Singapore with Newly Commercialized System

June 30, 2014

Windular Research and Technologies Inc., was, for the second consecutive year, an invited guest of the Province of Ontario and the Government of Canada, to CommunicAsia in Singapore. CommunicAsia is the largest telecommunications industry convention in Southeast Asia and one of the largest in the world, and served as the global launch of Windular in 2013.

"It's fitting that Windular returned to CommunicAsia this year with our fully commercialized 10 kW wind and 2 kW solar tracking systems," said Andrew Kain, Vice President, Corporate Affairs. "We received such an incredible response to the launch of our technology at last year's conference that we wanted to return to Singapore in order to continue developing our relationships with telecom owners, operators and carriers, as well as new distributors and installation partners."

As renewable energy becomes a viable alternative to traditional diesel generators for powering telecom tower base stations, and the industry becomes less reliant on the costly fossil fuel, Windular's technology is uniquely positioned to provide long-term, fixed-price renewable energy solutions for powering the telecom industry.

About Windular Research and Technologies Inc.

Windular is an Ontario, Canada, based company whose founders have over 50 years' experience in the telecom tower and renewable energy industries worldwide. Windular designs and manufactures wind and solar tracking systems that allow end-users to harness the wind and sun while using existing tower assets to generate clean, cost-efficient, reliable power.
