Windular Research and Technologies Inc., will showcase it's 10 KW system in Pakistan

Windular Research and Technologies Inc. enters into a proof of concept contract to pilot it's wind system with major telecom in Pakistan

June 1, 2015

Windular Research and Technologies Inc., has entered into a contract to pilot its 10 KW wind system in Pakistan with a major telecom provider. The integration of the state-of-the-art renewable energy platform will be the first phase whereby other sites with similar characteristics have already been identified and upon the successful pilot, other systems can be implemented.

The ongoing costs to operate these remote sites with diesel generators and the additional maintenance cost is the cornerstone to adopt the Windular system to reduce the reliance of the fossil fuel based energy system. The Windular system will feed directly into the battery system that is currently on-site.

About Windular Research and Technologies Inc.

Windular is an Ontario, Canada, based company whose founders have over 50 years' experience in the telecom tower and renewable energy industries worldwide. Windular designs and manufactures wind and solar tracking systems that allow end-users to harness the wind and sun while using existing tower assets to generate clean, cost-efficient, reliable power.
